

15 February 2007

Consultation on the following Railway Group Standards:

GM/RT2484 Issue 2 Draft 3a: Audibility Requirements for Trains

Extract from GE/RT8000/TW1 Issue 6 Draft 1: Preparation and Movement of Trains - General

Thank you to all people and organisations that commented on the above documents, dealing with train horns.

In accordance with the Railway Group Standards Code, I now attach summaries of the comments received and the Rail Safety and Standards Board responses, together with the latest drafts of the documents. Our responses were reviewed and approved by:

- Rolling Stock Standards Committee on 26 January 2007 for GM/RT2484
- Traffic Operation and Management Standards Committee on 06 February 2007 for GE/RT8000/TW1.

The final drafts were also presented to the same Standards Committee meetings and approved for publication, subject to no further comments being received within two weeks of the date of this letter that would require further consideration by the relevant Standards Committee.

Yours sincerely

Anne Blakeney
Project Manager
