

Safety Performance Reports

Summary

Rail remains one of the safest forms of transport, and the industry has a track record to be proud of. However, it is essential that we constantly review and monitor resources to ensure that we provide members with all the latest information they need around safety issues. Our safety reports help you stay on top of what you need to know.

Signals Passed at Danger and Train Protection and Warning System

A monthly report summarising Signals Passed At Danger (SPAD) performance and Train Protection and Warning System (TPWS).

Precursor Indicator Model

The Precursor Indicator Model (PIM) measures the underlying risk from train accidents. This is updated periodically.

Periodic safety performance

These reports provide information on fatalities, reportable train accidents and accident precursors for the period in question. Graphic representations of trends are also included. We use the latest information available when producing safety updates, based on data available at the time of running the report.

Annual health and safety

The Annual Health and Safety Report combines the latest information on health and safety performance, operational learning and risk reduction initiatives from the year. It takes into account reports to the *Confidential Incident Reporting & Analysis Service (CIRAS)*. It also gives an overview of progress in implementing the strategy in *Leading Health and Safety on Britain's Railway (LHSBR)*. We identify where things have gone well and some areas of concern.

LHSBR quarterly progress

The *LHSBR quarterly progress reports* provide an update on what the industry is doing to meet the strategy's aims and objectives and includes safety performance data. These reports are published in September, December and March of every financial year, the final update in June is replaced by the Annual Health and Safety Report.
